**TUSKITE WORKS, BLOCK A, PITSEA HALL LANE, PITSEA,
BASILDON, ESSEX, SS16 4UH**

T: 01268 551952 E: CLINIC@TRIPLEACES.CO.UK

TIMELINE OF THE BREEDING PROCESS

The following applies for ALL dog breeds and is general guidance:

- As soon as you see signs that your girl is in season contact us. We will advise you when to come in for ovulation testing. This will be day 9 from the first signs of bleeding.
- 2 x ovulation testing will be provided with our package deals or pay per test. You may require several depending on your girl's levels. When her levels are high enough we will advise you when to come in for the first Artificial Insemination. Please discuss with us options for studs.
- We will book you in for Artificial Insemination on the optimum day for fertility. 2 x AI provided with our package deal or pay per AI (we recommend 2 rounds to increase chances of conception).
- 10 days after first AI your bitch will require a Herpes injection (this can be done at local Vets).
- 32 days after the first AI – You will need a pregnancy scan to confirm pregnancy (included in our package deal or pay separately).
- 51 days after first AI the second Herpes injection is required (this can be done at local Vets).
- 60-63 days after first AI we recommend delivering puppies via C-Section to reduce risk to Mum and pups. We can discuss our recommendations for local vets to use.
- Puppies to be wormed at 2,4,6 & 8 weeks old.
- Puppies to be microchipped at 6-8 weeks.

***If you have any concerns regarding the health of your dog or puppies please call Essex Vets or a vet of your choice immediately**
